

January 18th, 2007

In the mid 1990's we took advantage of the Power Smart Program that BC Hydro was offering to its customers. With this program, we had all of our windows and doors replaced with Low E, Argon filled double pane glass. We immediately noticed quite a difference in our heating bill as well as living comfort. There were fewer drafts and we heard far less outside noise.

David Coulson was the contractor and we were so impressed with David, his crew and their efficiency that we enquired about the possibility of having an existing, large south facing sundeck made into a sunroom/conservatory.

David came up with several wonderful ideas that were incorporated into the plans and they then set to work. To make a long story short, our sunroom is our favourite room of the house. Even on a dull, dreary winter's day, because of all the windows and natural light, it is bright and cheerful. Its large windows, pot lights, high ceiling and moldings add a touch of elegance.

Several years later, we decided to remodel our dreadful kitchen and naturally we contacted David. This was much more entailed than the sunroom, but without too much to-do, the plans all came together and today we have a marvelously modern, bright, cheery kitchen with plenty of work area. It is great for entertaining.

We have confidence in David Coulson Design. Come spring, we'll be looking to David to plan and construct a deck off the kitchen. We know he'll come up with the perfect design encompassing everything we need and desire in a deck – even ideas we don't know that we want --- yet! 😊

Sincerely, Kathy Rezansoff
